LETTER OF RECOMMENDATION

It gives me immense pleasure in recommending **Ms. Yamini Ratna Thota** who is desirous of seeking admission into Master's program in your prestigious university. Every year we teach a lot of students, but only few of them are remembered even after they passed out of college, for their abilities make a niche for them in our memories and she is definitely one of them. I observed her as both the head of the department and as well as her teacher. This interaction with her provides me sufficient information to gauge and assess her. She is one of the most creative, intelligent and hardworking individuals.

I taught her **Computer Programming through C** in her II Semester and that was when I first observed her innate abilities in areas like critical thinking, analytical thinking, problem-solving and programming. She was exceptionally good and outsmarted her peers in these areas. I would like to bring to your attention about an incident which is worth, while mentioning about her. One day I gave a small assignment in the class to write a program after teaching the basics of C programming. Problem statement is to check if the given number can be expressed as the power of 2. Everyone in her class started solving this problem using divide by 2. She is only person who solved by using bitwise operations. I am very impressed by her approach.

Yamini is constantly in the process of applying her knowledge for a practical purpose and this is evident from the fact that she got selected to Mission R&D, which transformed her path towards a rewarding career. During her final year in college, she got an internship offer from Kony India Private Limited in which she did a splendid job of getting converting this offer to a full-time employment as a Product Developer.

Apart from her academics, she is also active participant in various extra-curricular activities. Her participations in several seminars and workshops shaped her a special personality in our college. She is labelled as a good event organizer at Ekathra, a technical fest for organizing Paper Presentations for our Department.

I strongly reiterate that with all her skills and assets, she deserves to be part of your university. Hence, I strongly recommend her for admission into the masters program in your university with adequate **financial assistance**.
