LETTER OF RECOMMENDATION

I take this opportunity to express my views about **Ms. Yamini Ratna Thota** for the graduate studies at your esteemed university. I handled core subjects in the discipline of Computer Science such as **OOPS through JAVA** and **Design and Analysis of Algorithms**. I had a close association with her and I am glad to present this testimonial for your reference.

Evidently she has an insatiable zeal for learning. It is always reflected through her grades. She stood among the top 3 of her class and her consistent performance is due to her undisputable command over fundamentals.

During the period of my association with her I could see how she applies the concepts in tackling different problems associated with it. She has an inbuilt nature of reasoning and Logical thinking. She is committed and sincere at her work. Her attitude has always been through infuriated and her self-confidence pays her academic dividends. Three years of interaction has been an ample time for me to note her programming skills coupled with an excellent grasp of the concepts. I see her practicing in labs after college, apart from the course books she used to come to me with doubts from CLRS book for algorithms. Her assiduous nature, motivation can be an asset to any research team.

Not only did she excel in her academics, she always takes an active part in seminars. Under my guidance she gave a presentation on Cloud Computing. Her flair for creativity and her enthusiasm for learning and sharing what she has learned will make her an excellent teacher or research assistant if given an opportunity.

Having said that her attitude coupled with knowledge is a great asset, I assert she would be one of the most prospective candidates for your department. I hope this information proves helpful and I will be pleased to answer any additional questions you may have. I strongly recommend her application for admission into your university, with suitable financial aid.
